

Powered By Mother Nature

Nature does it's own composting. In warm weather, natural aerobic soil micro-organisms digest and transform leaves, grass and other organic debris into a hygienic, non-offensive soil component called "compost." Compost conditions the soil by adding nutrients for new plant growth and holding moisture in the soil.

BioLet unites this natural process with patented technology to accelerate and optimize biological decomposition, evaporate excess liquid and exhaust odors and water vapor ...all within an attractive home appliance that is easy to use and economical to operate.

It's Easy!

Each composting toilet comes complete with everything required for the average installation and start-up. Simply attach the mounting brackets to the wall, install a ventilation pipe through the roof, pour in the included starter mulch and plug the unit into a standard 120VAC outlet (electric models only). Anyone with basic handyman knowledge can install a unit in a couple of hours with common household tools!

As the material composts it falls into a convenient tray, in the bottom of the unit, which is emptied once every 2 months to a year (depending on usage).

Included with each unit

- 12 ft. ventilation kit (shown above)
- Mounting hardware
- 4 gallon bag of starter mulch
- Installation / operation video
- Instruction manual
- Manual mix rake
- Drain tube (non-electric models only)

Specifications

Measurements:

XL: 32"D X 25"W X 26"H

All others: 29"D X 21.5"W X 26"H

Seat height of all models 19.5"

Electrical:

XL: 370W (heaters 305W, mixer 40W, fan 25W)

Deluxe: 290W (heater 225W, mixer 40W, fan 25W)

Standard: 250W (heater 225W, fan 25W)

***The Best-Selling
Composting Toilet
In The World!***

The Best-Selling Composting Toilet In The World!

BioLet, with over 30 years on the market, is the world's first self-contained composting toilet! Now in their sixth generation of continually improved product lines, BioLet has become the Best-Selling Composting Toilet In The World. BioLet's superior design gave them prominent recognition as a gold medal recipient at the International Inventor's Exhibition in Geneva Switzerland for the year's best invention in the environmental field.

BioLet Deluxe

- Fully Automatic
- Electric - 120VAC
- 3 people full-time usage
- 4 people part-time usage

The BioLet Deluxe is the perfect solution wherever you don't need the extra capacity of the XL, yet still desire the convenience of a fully automatic system. The BioLet Deluxe has a fully automatic mixing mechanism, heating element and ventilation fan. Simply lower the seat after each use and your BioLet Deluxe does the rest!

BioLet Basic

- Manual mixer
- Non-electric
- 2 people full-time usage
- 3 people part-time usage

The BioLet Basic is the convenient and practical solution wherever water and electricity are not readily available. Since the BioLet Basic has no heaters or fan to aid in the evaporation of excess liquids, a drain tube is provided to evacuate the liquids to a leech pit or auxiliary storage container.

BioLet XL

- Fully Automatic
- Electric - 120VAC
- 4 people full-time usage
- 6 people part-time usage

For those who need extra capacity, the BioLet XL is the right choice. This unit is fully automatic, has a 40% larger composting chamber, two heating elements, ventilation fan, advanced mixing mechanism, and excess liquid sensor making it the most advanced composting toilet on the market! Previously tested and approved by the National Sanitation Foundation, the BioLet XL exceeded all testing requirements by a wide margin and was proven to be the safest composting toilet available.

BioLet Standard

- Semi-automatic
- Manual mixer
- Electric - 120VAC
- 3 people full-time usage
- 4 people part-time usage

The BioLet Standard contains an electric heater and fan to aid the composting process by evaporating excess liquids, regulating the temperature, and providing additional air flow to the compost mixture. Yet, this model has a manual mixer, making it the perfect solution for remote locations with part-time usage where electricity is available. Simply turn the T-handle on top a couple of times after each use and your compost is mixed and aerated.

BioLet NE

- Batch composter
- Non-electric
- 4 people full-time usage
- 6 people part-time usage

The BioLet NE is the ideal toilet for remote locations where electricity is not available and a larger capacity is needed. The BioLet NE has two composting bins, one under the seat and one in the rear. Like the BioLet Basic, the BioLet NE has no heater or fan to aid in the evaporation of excess liquids. Therefore, a convenient drain tube is provided to evacuate the liquids to a leech pit or auxiliary storage container.
